

**TASK 2 : Email to AIQ backend engineer explaining the issue.**

Hi,

I have gone through data discrepancy issue with Johnny's Jeans total revenue for first 10,000 customers.

I have found out that some users latest **batch\_ids** were not updated in AIQ platform. I believe that these **batch\_ids** could not be ingested in to AIQ platform due to some underlying issue.

Another thing to note here is that all these **user\_ids** seem to be from **delta3.csv** file. This might help you while debugging at your end.

Please find attached **Batch\_ids\_mismatched.csv** file with all the **user\_ids** and corresponding **batch\_ids**, **total\_spend** fields which are causing this problem.

I hope these details can get you started to find out why this issue happened. I will be happy to sit with you to discuss more if required.

Thank you.

Best,  
Harish Puvvada
